

**THE ECOLOGICAL
ERA OF
AUTOMATIC
SPREAD DISPENSING
HAS BEGUN.**

FOODDUCK®

**Almost 0%
of spread wasted**

**Only 10% of the current
packaging material used**

**Only 10% of the current
amount of waste produced**

**100% aluminium-free
spread package**

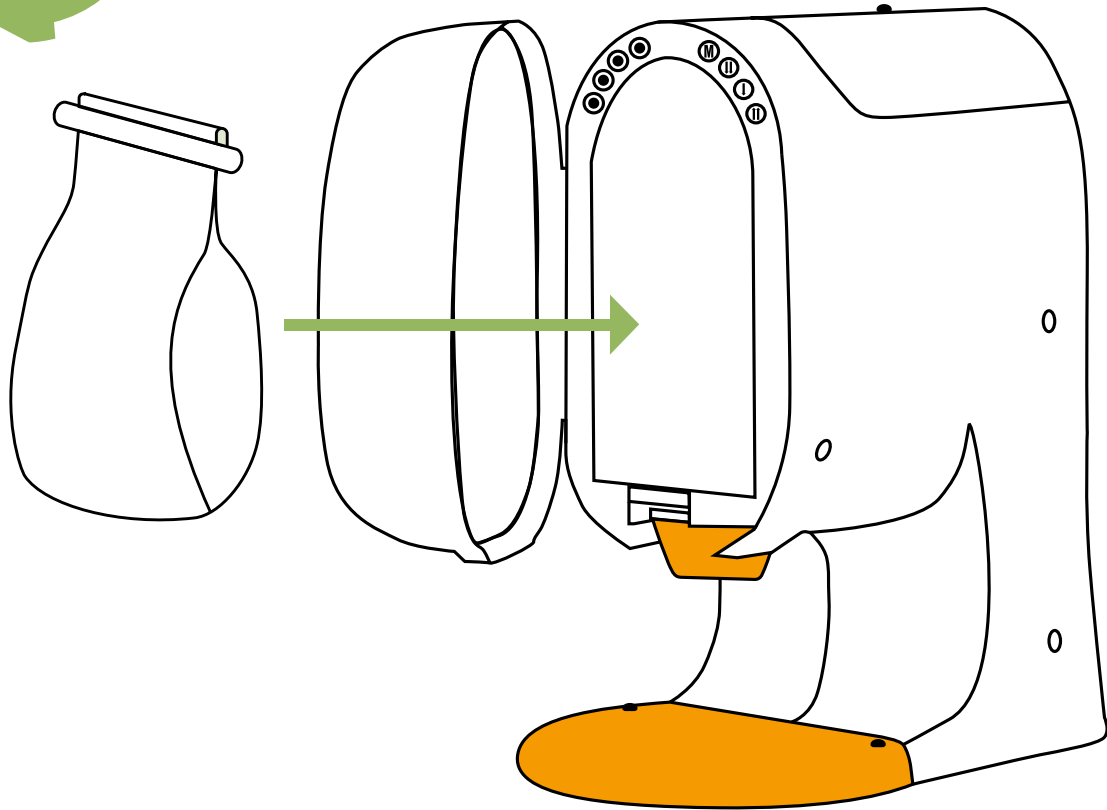

FINNISH INNOVATION FOR BREAD BUFFETS

The FOODDUCK® spread dispenser is a completely new and intelligent solution for serving butter-vegetable oil blends, margarine and other spreads at restaurant self-service counters, bread buffets and professional kitchens all over the world.

The fully automatic FOODDUCK® reinvents the bread buffet and offers considerable advantages from the viewpoint of the environment restaurants and their customers.

MORE ECOLOGICAL DINING

FOODDUCK® makes dining more ecological and reduces its environmental impacts. The core of its ecological operation is the new bag package.

A bag package contains only a fraction of the raw materials required for a spread case.

The modern bag packages are completely aluminium-free and thus easier to recycle than cases.

An empty bag package takes up only about one-tenth of the space taken up by cases. This reduces environmental load and waste disposal costs.

LESS WASTE

FOODDUCK® reduces the amount of waste considerably: the automatic dispenser and its advanced technology allow efficient and complete emptying of the entire spread package. In addition, the exact chosen portion size will bring substantial savings in spread consumption.

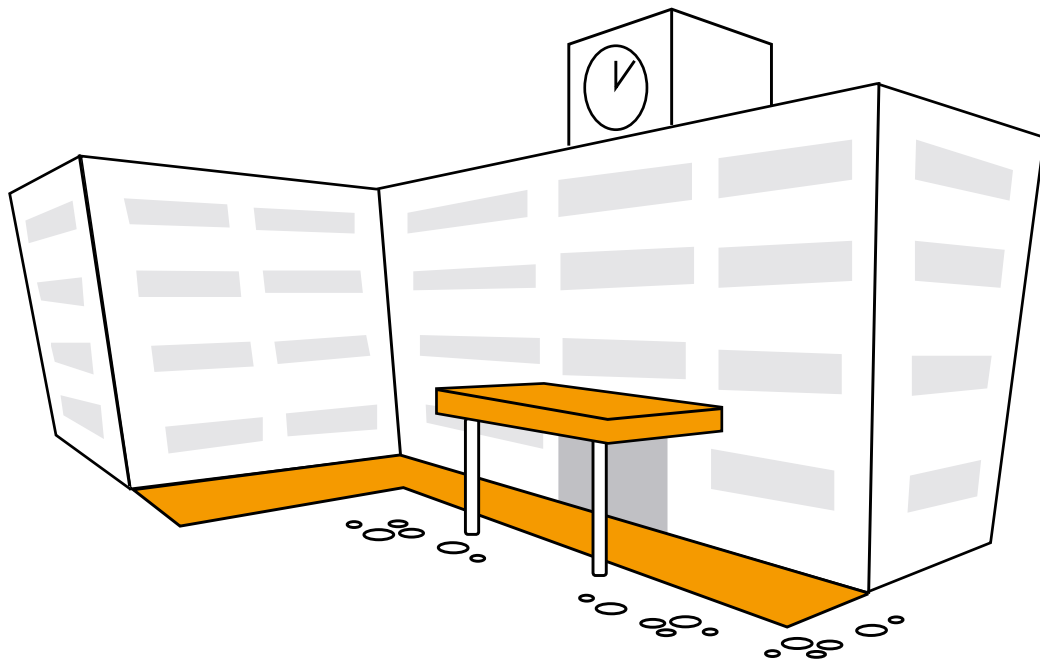

SAFE AND HYGIENIC

FOODDUCK® operates fully automatically, and its integrated cooling system ensures optimal temperature of the spread throughout the use. The spread is protected against oxygen, light and bacteria of the environment – contrary to a traditional open case. The hygiene is also

improved by that the spread is never touched by hand. Moreover, FOODDUCK® is a safe choice for people with the coeliac disease as no bread crumbs touch the spread.

FOODDUCK® is a smart and modern choice for every restaurant and

cafeteria. It brings clear savings and renders restaurant business more ecological. A neat bread buffet equals to improved customer experience, and automatic operation reduces the employees' workload.

FOODDUCK® IS SUITABLE FOR ALL KINDS OF LOCATIONS:

- restaurant/café bread buffets and service counters
- hotel breakfast buffets
- school canteens
- canteens/restaurants at sheltered housing and care homes
- professional kitchens

DESIGN AND TECHNOLOGY

FOODDUCK® is an innovative product that is designed and made in Finland. The device is technically sophisticated but extremely simple to use. When the motion sensor detects a slice of bread or a plate, the device automatically dispenses a predetermined amount of spread.

The novel bag package is easy to replace. Cleaning the device is easy

as well. Only the machine-washable nozzle element actually touches the spread.

In the front part of the FOODDUCK® dispenser there is a screen that can be used for displaying information on the spread and its nutritional value. Alternatively, it can be used for marketing communication.

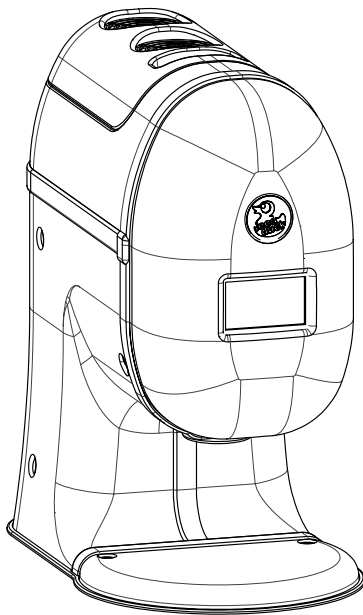

FOODDUCK® BEARS THE FINNISH KEY FLAG SYMBOL, WHICH CAN BE GRANTED TO A PRODUCT MANUFACTURED IN FINLAND, AND THE DESIGN FROM FINLAND MARK. FOR US, THESE SYMBOLS THAT CONFIRM FINNISH QUALITY, COMPETENCE, AND RELIABILITY ARE A MATTER OF HONOUR.

TECHNOLOGY

There are two versions of the FOODDUCK® device. The smaller “Mini” does not include a cooling system.

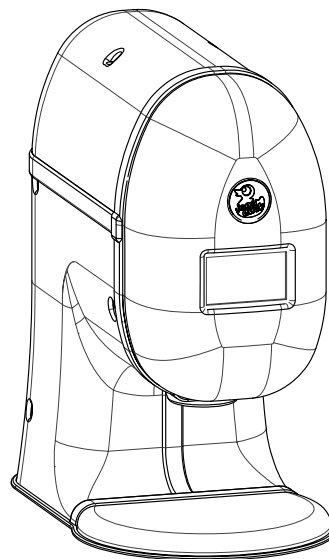

FOODDUCK

- 62 x 34 x 59cm (H x W x D)
- 4.3” touch screen
- Built-in cooling system
- Framework structure: electropolished stainless steel
- Power supply: 230/110V
- Spread package: 1kg (140–240 portions)
- Made in Finland

FOODDUCK MINI

- 56 x 29 x 48 cm (H x W x D)
- 4.3” touch screen
- Framework structure: electropolished stainless steel
- Power supply: 230/110V
- Spread package: 1kg (140–240 portions)
- Made in Finland
