A FINNISH INNOVATION FOR BREAD BUFFETS

The FOODDUCK® spread dispenser is a completely new and intelligent solution for serving butter-vegetable oil blends, margarine and other spreads at restaurant self-service counters, bread buffets and professional kitchens all over the world.

The fully automatic FOODDUCK® reinvents the bread buffet and offers considerable advantages from the viewpoint of the environment, restaurants and their customers.

SAFE AND HYGIENIC

FOODDUCK® operates fully automatically, and its integrated cooling system ensures the optimal temperature of the spread throughout its use. The spread is protected against oxygen, light and bacteria, unlike with conventional uncovered spread cases. Hygiene is also improved in

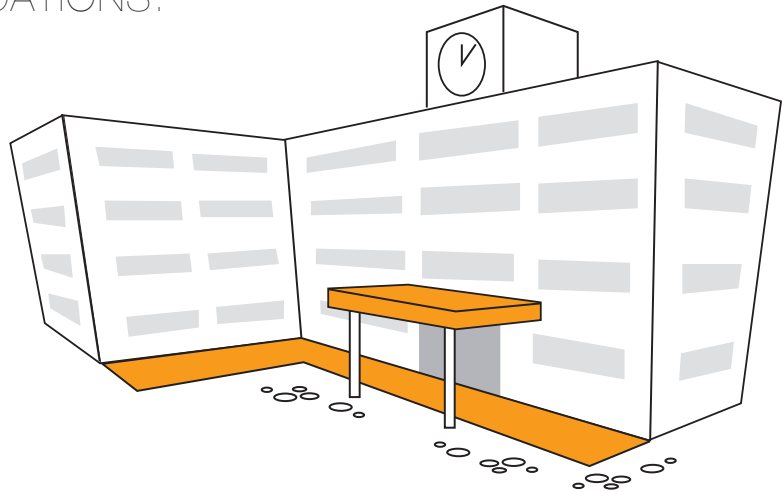

that the spread is never touched by hand. Moreover, FOODDUCK® is a safe choice for people with the coeliac disease!

FOODDUCK® is a smart and modern choice for every restaurant and cafeteria. It brings clear savings and

makes the restaurant business more ecological. A neat bread buffet means an improved customer experience, and automatic operation reduces employees' workload.

FOODDUCK® IS SUITABLE FOR ALL KINDS OF LOCATIONS:

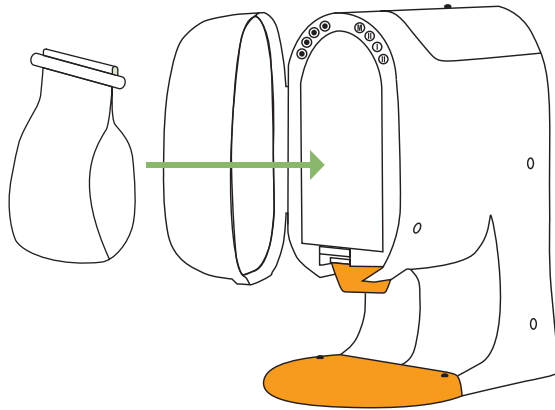

- Restaurants
- Schools
- Hotels
- Canteens
- Service counters
- Professional kitchens
- Sheltered housing
- Care homes
- Hospitals

LESS WASTE

FOODDUCK® reduces the amount of waste considerably: the automatic dispenser and its advanced technology allow the efficient and complete emptying of the entire spread package. In addition, the exact chosen portion size will bring substantial savings in spread consumption.

MORE ECOLOGICAL DINING

FOODDUCK® contributes to more ecological dining with reduced environmental impacts. The core of its ecological operation is the new package.

A bag package contains only a fraction of the raw materials required for a spread case.

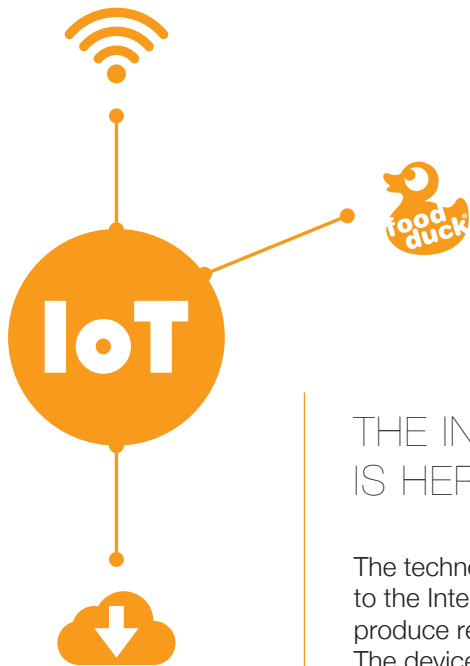

The modern bag package is completely aluminium-free and thus easier to recycle than are cases.

An empty bag package takes up only about one-tenth of the space taken up by cases. This reduces both the environmental load and waste disposal costs.

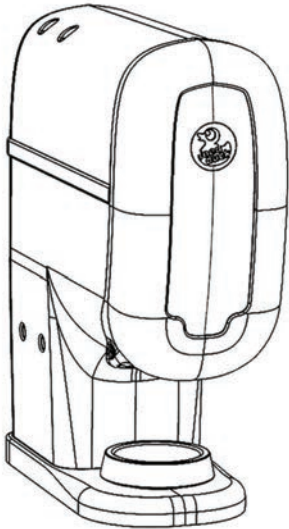

THE INTERNET OF THINGS IS HERE

The technology used in FOODDUCK® devices connects them to the Internet of Things. Our new and more intelligent solutions produce real-time data on spread consumption and usage. The devices can even be programmed to independently order more spreads into stock and to automatically anticipate service needs. The possibility of remote control also diminishes the environmental burden caused by the use, service and update of the device.

FOODDUCK IS SUITABLE FOR ALL KINDS OF LOCATIONS

There are three FOODDUCK® models to choose from. FOODDUCK® mini and FOODDUCK® mobile devices do not include a cooling system. FOODDUCK® mobile comes with both battery power and mains power. This ensures that there will be just the right type of FOODDUCK® device for each purpose.

FOODDUCK MOBILE

51 x 18 x 36,5 cm (H x W x D)

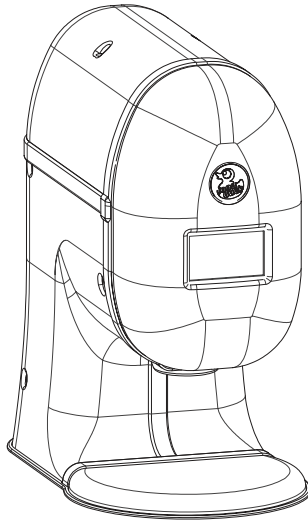

The frame: electro-polished stainless steel

Power supply: 230/110 V

Battery operated if needed

Spread package: 1 kg, 140-240 portions

Made in Finland

FOODDUCK MINI

56 x 29 x 48 cm (H x W x D)

4,3" touch screen

The frame: electro-polished stainless steel

Power supply: 230/110 V

Spread package: 1 kg, 140–200 portions

Made in Finland

FOODDUCK

62 x 34 x 59 cm (H x W x D)

4,3" touch screen

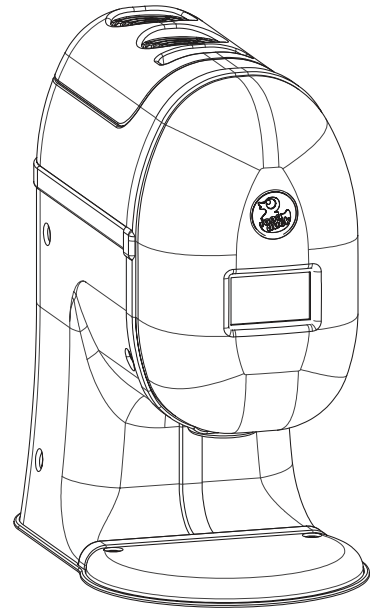

Built-in cooling system

The frame: electro-polished stainless steel

Power supply: 230/110 V

Spread package: 1 kg, 140–200 portions

Made in Finland

DESIGN AND TECHNOLOGY

FOODDUCK® is an innovative product designed and made in Finland. The device is technically sophisticated yet extremely simple to use. When the motion sensor detects a slice of bread or a plate, the device automatically dispenses a predetermined amount of spread.

The novel bag package is easy to change. Cleaning the device is easy as well. Only the machine-washable nozzle element actually touches the spread.

It's possible to obtain a screen in the front part of the FOODDUCK® dispenser that can be used for displaying information on the spread and its nutritional value. Alternatively, it can be used for marketing communication.

FOODDUCK® spread dispensers are Finnish Key Flag products. The symbol is only granted to a product that fulfils specific criteria and is manufactured in Finland. This message of Finnish quality, competence and reliability is a matter of honour for us.

FOODDUCK® dispensers have been awarded the Design from Finland mark, a guarantee of high-class Finnish design know-how.

The FOODDUCK® concept is easy and simple.
